

CUSTOM ROCKER SWITCH COVERS

Enerdrive are proud to release our etched switch covers to suit Carling type rocker switches. The opaque etched text and symbols allows for back lighting, providing easy identification even in the dark. Never second guess what you're turning on, or off again!!

Available on new Enerdrive Power System Series builds, pre-made custom switch panels or as individual parts to finish off your custom installation. Selecting from the standard range of covers will take your install to the next level.

For those creating something a little more unique, Enerdrive design & etch all switches in house which allows for new and one-off switch covers to be developed. Just contact the team at Enerdrive for your special requirements.

To order simply complete your business and contact details on the form over leaf, list the switch number/s required along with the quantities of each, and return to the Enerdrive sales team.
