

# The Fire One Suppression Sticker

How it works

Affix the Suppression Sticker where there is risk of electrical fire. I.e. boat, caravan, 4wd battery boxes, home fuse box, UPS cabinets and tool chargers

## STEP 2

Fire breaks out in the protected area

### STEP 3

The fire has flame contact with the Suppression Sticker

# STEP 4

The Suppression Sticker activates when heat reaches a pre-set temperature

Extinguishing agent floods the protected area putting out the fire

# The Fire Supression Sticker PROTECT YOUR BOX

INSTRUCTIONS

Remove the backing to expose the sticky bit Firmly place on flat, clean surface no more than 20cm above the potential ignition point
